

# SETLIST ORGANIZER

## Purpose

A web application is needed to manage band repertoires and help musicians create set lists for concerts and rehearsals.

## Functions:

- View and edit the list of music groups.
- View and edit the list of tracks of the selected group
- View and edit the list of all created events and the list of events for the selected group.
- View and edit the setlist for the selected event
- Adjust the sorting order of the tracks in the setlist.
- Export of the specified list for the selected event to the form for printing.
- Receiving a report on the repertoire for the selected period.
- Obtaining the entire repertoire
- Getting a report on the number of performances of tracks for the selected period.
- Getting a report on all events for the selected period

## 1. Groups

### 1.1. Viewing a list of music groups

The mode is intended for viewing the list of created music groups and adding new groups.

Main scenario:

- The user selects the "Groups" menu item.
- A form will open to view the list of all created groups.
